COLD CHAIN TRANSPORT SYSTEM

Temprecord has developed a traceable validated system for transporting temperature critical product at set parameters in order to maintain the integrity of the product on arrival.

Optional: Total System or individual components

- **Outer carry bag** – customised to your requirements
- **Bins** – specifically designed for longevity of cold life
- **Cool packs** – specifically designed for longevity of cold life – may be chilled or frozen
- **Separators** – for added insulation and protection of product

Total System

Comprises the components mentioned above plus software calculator to compute the necessary packing configuration required for each specific set of parameters pre-programmed.

The individual packing diagram is traceable back to the original validated test performed in Temprecord's ISO/IEC17025 calibration standards laboratory under simulated conditions.

This total system is currently used by our clients who transport critical product nationally. See sample packing instruction sheet on page 2 of this brochure.

COLD CHAIN TRANSPORT CONTAINERS

Polystyrene Transport Containers: BL8, BL15 & BL30

Dimensions:

BL8 Container

OD 36.5x31x27cm
ID 23x18x12.5cm
Inside volume 5 litres

BL15 Container

OD 43x35x31cm
ID 29.5x22x16.5cm
Inside volume 10.5 litres

BL30 Container

OD 43x35x42cm
ID 29.5x22x27cm
Inside volume 17 litres

Packaging Sequence

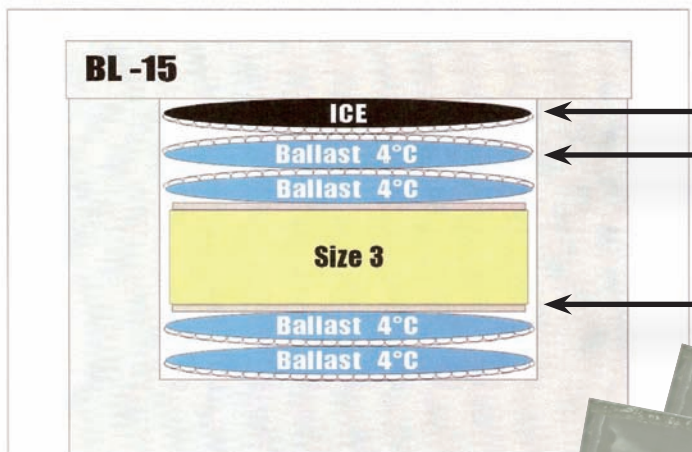

Sequence ID 15203

Type	Vaccine	Ambient Temp (c) 8 to 15
ColdLife	24 hours	
Ballast (units)	4	
Ice (units)	1	
Size	BL15	
Units	6	

Packing instruction

Traceable to original validated tests performed in laboratory under simulated conditions

Cool Pack – frozen

Cool Pack – not frozen (applied as insulation and protective barrier between the product and the frozen cool pack)

Separator

Temprecord Cool Pack:

BL8: 170 x 230mm, 400g
BL15/30: 200 x 300mm, 500g
